```

OUTPUT:-

```
PS C:\Users\User\OneDrive\Desktop\Desktop\AnanyaProject> & C:/Users/User/AppData/Local/Programs/Python/Python314/python.exe "c:/Users/User/OneDrive/Desktop/Desktop/AnanyaProject/to-do list.py"

===== TO DO LIST =====
1. Add Task
2. View Tasks
3. Complete Task
4. Delete Task
5. Search Task
6. Exit
Enter choice:
```

# PROJECT REPORT

Project Title: To-Do List

Intern Name:
Ananya Jain

Organization:
DecodeLabs

Technology Used:
Python

Project Objective:
The objective of this project is to develop a task management application using Python. The application helps users organize their daily tasks efficiently.

Features:
• Add new tasks
• View all tasks
• Search tasks
• Mark tasks as completed
• Delete tasks
• User-friendly menu interface

Python Concepts Used:
• Lists
• Dictionaries
• Functions
• Loops
• Conditional Statements
• User Input Handling

Project Working:
The user interacts with a menu-driven interface. Tasks are stored in a list and each task is represented using a dictionary containing task information and status. Users can perform different operations such as adding, viewing, searching, completing, and deleting tasks.

Learning Outcomes:
• Improved understanding of Python programming fundamentals.
• Learned how to manage data using lists and dictionaries.
• Gained experience in developing a menu-driven console application.
• Enhanced logical thinking and problem-solving skills.

Conclusion:
The To-Do List successfully demonstrates the use of Python data structures and programming logic to create a practical task management system.
